The first version of Photoshop was released in 1987 by DreamWorks as an automated application for doing retouching on film. The developer provided a model image, along with the photoshop source code, and invited other developers to create competing applications. (For a comparison of the different versions of Photoshop and their key features, see the table at the end of the article). The first version of Photoshop was released in 1987 by DreamWorks as an automated application for doing retouching on film. It contained 64 colours (and a palette of 23 'wild-colours'), and a resolution of 512x384 pixels on a 4.77MB floppy disk. The Graphic Arts division of Adobe, Inc., acquired rights to the Photoshop name in the mid-1990s and started to develop a software that used a new technology, the Adobe Distributed Computing Architecture (ADCA). The company built the software from the ground up, including an entirely new rendering engine, an integrated scripting language, a drag-and-drop workflow system, and a new networking technology. Initially it was very expensive, but the price dropped from $600 in 1996 to just under $200 in 1999. This did not mean the application was cheap, for a fully featured version of Photoshop would cost thousands of dollars; as a good example, a competitor, Pixelmator, was priced at $299 (around £160). There were three models of Photoshop offered. A non-networked home version, the Portable Photoshop, sold for $219 in 1999. A networked edition, the Macintosh version, was priced at $499 at the time. This had a desktop icon, and was easily accessed with Macintosh-like gestures. Photoshop became available for the first time on Intel Macintoshes running Mac OS 8 in January 2000. The Windows version, priced at $699, was available for Windows 95, 98, and NT. It was released as Microsoft Word for Windows 9x Version 6.0 and Windows 98 SE Version 3.0. It was at this point that Microsoft had

produced a new interface to Windows called Windows Vista. The lack of a Windows version for Windows 7 is the reason it uses the term 'Vista' rather than 'Windows' in the system requirements list, despite the fact that it is actually a new version of Windows. TEL AVIV – Pro-Palestinian demonstrators clashed with Israeli police at the entrance of the U.S. Consulate in Jerusalem on Tuesday following the discovery of a Palestinian flag inside the building's grounds. Video footage released by the Media Line satellite news agency showed demonstrators shouting and waving Palestinian flags, while some threw stones at officers. "We came because we oppose the occupation and the state of Israel and there is a flag of the state of Palestine here," one of the protesters told Media Line. Another added: "I just want them to take it down and leave it to the two countries." Medics, meanwhile, said one of the protesters had been shot with a sponge-tipped bullet, but that he had suffered only minor injuries and was out of hospital within hours. Last Friday, a Palestinian flag was found inside the grounds of the U.S. Consulate, but officers declined to comment on whether it was planted.HOW TO RUN AIRLINE AIRCROSS FOUNDATION STK CONSOLIDATION Airline Aircross Foundation (formerly Airfare Foundation) has been recently acquired by KIND as part of its larger acquisition of Gogo, Inc. and the Delta Foundation. Emmanuel Macron, whom Cameron appointed to the top diplomatic post at the Elysee Palace in January, said he believed the plan would work if the same rules were applied to migrants who entered Europe through the old continent. Speaking alongside Prime Minister Malcolm Turnbull at a press conference held after the two leaders signed a new strategic partnership treaty, Macron called for a "common visa policy" that applies to the entire European Union, ensuring that EU-based immigrants can be easily identified in the region. "We have to ask ourselves how to deal with people that come in from outside the EU," he said. "If, between the two of us, we can do this, it will be a major step forward." Turnbull said Australia had negotiated

Spatial-temporal image correlation spectroscopy: towards clinical translation. Optical microscopy, while offering high resolution and image contrast, has limited

penetration depth and is therefore challenging to image deep tissue structures and processes. Instead, ultrasound offers high penetration depth, but does not have sufficient specificity to resolve sub-millimeter structures and processes. On the other hand, light scattering techniques such as laser speckle imaging (LSI) can provide deep penetration with high specificity, but also offer a limited field of view and are difficult to image rapidly and reliably across large areas. Optical coherence tomography (OCT) is a spectral domain technology that provides high speed, high spatial resolution and full-field imaging. It can be used for large area imaging, but the penetration depth of OCT is limited to 2-3 mm, and is not optimal for imaging tissue and processes deep within the body. In contrast, spectral-domain image correlation spectroscopy (SD-ICRS) based on spatial-temporal image correlation spectroscopy (STICS) can detect light scattering changes between two cross-sectional frames for large field of view imaging, and can be imaged rapidly and reliably across large areas. Here we review the literature on the advantages and current limitations of each of these technologies. We then discuss progress towards clinical translation of SD-ICRS technology.Arthur Smit Jr. Arthur Smit Jr. (21 March 1939 – 1 May 2015) was a South African international lawn bowls competitor.
